Full stack web developer with a passion for natural and programming languages. With experience in Ruby on Rails, JavaScript, and React, and a background in office management, I discovered web development while working at various tech startups. I bring strong skills in project management and a desire for iterative innovation, which helps companies provide the best product and experience to their clients and employees.

TECHNICAL PROJECTS

Pets Seeking People - [Github](#) | [Ruby Gem](#)

Command line interface scraper gem to locate cats and dogs available for adoption by geographic location

- Scraped ASPCA website with Nokogiri and bundled results into CLI gem
- Published to RubyGems (900+ downloads)

Community Library - [Github](#) | [Demo](#)

Rails application for tracking books in your library, and lending or borrowing books from others

- Built application with MVC pattern and internal API, using Rails and JavaScript to power the front end
- Used OmniAuth for OAuth authentication via GitHub and Devise for authenticating other users
- Leveraged jQuery and JavaScript for AJAX functionality
- Integrated Kaminari to power pagination

Adopt A Pet - [Github](#) | [Demo](#)

Gamified adoptable pet search interface with React front end and Rails back end

- Incorporated user inputs into external API request (Petfinder) and persisted returned data to internal Rails API
- Managed application state with Redux
- Used Bootstrap's React-Bootstrap implementation for design elements

TECHNICAL SKILLS

Languages: JavaScript, Ruby, Python, HTML, CSS, SQL

Frameworks/Libraries: Ruby on Rails, Sinatra, Bootstrap, Django, jQuery, React, Redux

Persistence: SQLite, PostgreSQL

Testing: RSpec, Mocha, Capybara

Other: Git, Sublime Text, Fiddler, Postman, PythonAnywhere
